Comprehensive Email Security

FortiMail

FortiMail 60D, 200E, 400E, 1000D, 3000D, 3000E, 3200E and VM

Comprehensive Email Security

Proven Security

FortiMail appliances and virtual appliances are proven, powerful email security platforms for any size organization — from small businesses to carriers, service providers, and large enterprises. Purpose-built for the most demanding messaging systems, FortiMail appliances employ Fortinet's years of experience in protecting networks against spam, malware, and other message-borne threats.

Intelligent Protection

As part of the Fortinet Security Fabric, FortiMail prevents your email systems from becoming threat delivery systems. Its inbound filtering engine blocks spam and malware before it can clog your network and affect users. Its outbound inspection technology prevents other antispam gateways from blacklisting your users by blocking outbound spam and malware, including mobile traffic.

Key Features & Benefits

Flexible Deployment Options	FortiMail can be deployed in gateway, transparent modes and as a fully featured mail server. With hardware, VM and cloud form factors, FortiMail is flexible enough to cater to every customer requirement.
Apply Data Loss Prevention and Identity-Based Encryption	Detect sensitive information using defined data patterns and ensure secure delivery with no additional hardware or software to install, no user provisioning, no recipient pre-enrollment.
Prevent Phishing and Other Advanced Threats	Apply embedded URL inspection, top rated antimalware and optional sandbox integration to detect highly targeted attacks.
Identify and Block Spamming Endpoints	Carriers and Service Providers, prevent blacklisting of legitimate subscribers by identifying and blocking endpoints sending spam.
No Per-User or Per-Mailbox Pricing	Complete, multi-layered antivirus, antispam, antispyware and antiphishing protection for an unlimited number of users. Greatly reduces TCO.

Comprehensive Email Security

- Scalable solution from SME to the largest ISP and carrier networks
- Advanced Threat Outbreak Protection methods to protect against new emerging and targeted attacks
- Identity-Based Encryption to protect data in both push and pull methods
- Data Leak Prevention, and Policy-Based Encryption and Archiving enable compliance with SOX, GLBA, HIPAA, PCI DSS
- Flexible policy engine to enforce granular E-mail and security policies
- Real-time security updates from FortiGuard® Labs to maintain protection
- Industry leading price/performance
- Flexible deployment modes and architectures to meet all use cases
- Multi-layer threat detection for the highest level of user protection

High Performance and Unmatched Flexibility

FortiMail appliances provide high-performance email routing and security by utilizing multiple high-accuracy antispam filters. When coupled with industry leading real-time antivirus and antispware protection from FortiGuard Services, FortiMail provides you with extremely fast and accurate email security that won't affect end users or delay their communications. FortiMail can be deployed in the cloud or on premises and gateway, inline and server modes in a range of appliance or virtual machine form factors. This flexibility allows you to deploy FortiMail in the mode that best suits your environment.

Advanced Threat Protection

In addition to FortiGuard antivirus, FortiMail supports on-board code emulation to identify and block suspicious files based on

their intended behavior. Optional cloud-based or on-premise “sandboxing” provide a full, contained, run-time environment to thwart the highly targeted and tailored attacks that increasingly bypass traditional defenses. Rich threat intelligence, actionable insight and the option to share information with FortiGuard Labs in order to receive automated protection updates help organizations reduce the risk of compromise and breach from such sophisticated attacks.

Easy data protection and compliance

Enforce secure content delivery with FortiMail Identity-Based Encryption (IBE), S/MIME, or TLS email encryption options. Prevent accidental and intentional loss of confidential data using predefined HIPAA, GLBA, SOX or customized dictionaries.

FEATURES

System

- Wide range of deployment options:
 - Transparent, Gateway and Server Mode
 - On-prem or public or private cloud deployment
- Inbound and Outbound Inspection
- Multiple Email Domains with Domain Level Customization
- IPv6 and IPv4 Address Support
- Virtual Hosting using Source and/or Destination IP Address Pools
- SMTP Authentication Support via LDAP, RADIUS, POP3 and IMAP
- LDAP-Based Email Routing
- Per User Inspection using LDAP Attributes on a Per Policy (Domain) Basis
- Comprehensive Webmail Interface for Server Mode Deployments and Quarantine Management
- Mail Queue Management
- Multiple Language Support for Webmail and Admin Interface
- Email RFC Compliance

Management, Logging, and Reporting

- Basic/advanced management modes
- Per domain, role-based administration accounts
- Comprehensive activity, configurations change and incident logging and reporting
- Built-in reporting module
- Centralized quarantine for large scale deployments
- Optional centralized logging and reporting with FortiAnalyzer
- SNMP support using standard and private MIB with threshold-based traps
- Local or external storage server support, including iSCSI devices
- External Syslog support

Antispam

- FortiGuard antispam service
 - Global sender reputation
 - Spam object checksums
 - Dynamic Heuristic Rules
- Real-time spam outbreak protection
- Spam and phishing URLs and email addresses
- Full category FortiGuard URL Filtering
- Greylisting for IPv4, IPv6 addresses and email accounts
- Local sender reputation (IPv4, IPv6 and End Point ID-based)
- Behavioral analysis
- Deep email header inspection
- Integration with third-party spam URI and real-time blacklists (SURBL/RBL)
- Newsletter detection
- PDF Scanning and image analysis
- Block/safe lists at global, domain, and user levels
- Support for enterprise sender identity standards:
 - Sender Policy Framework (SPF)
 - Domain Keys Identified Mail (DKIM)
 - Domain-Based Message Authentication (DMARC)
- Flexible action and notification profiles
- System and user self-service quarantine

FEATURES

High Availability (HA)

- High availability supported in all deployment scenarios
 - Active-Passive mode
 - Active-Active configuration synchronization mode
- Quarantine and mail queue synchronization
- Device failure detection and notification
- Link status, failover and redundant interface support

Antimalware

- FortiGuard Antivirus detection
- Heuristic-based behavioral detection
- Real-time malware outbreak detection
- Cloud and On-prem sandbox integration

Advanced

- Server mode deployment with advanced groupware functions
- Policy-based e-mail archiving with remote storage options
 - Support for Exchange journal archiving
- Comprehensive data-loss prevention with file fingerprinting and sensitive data detection
- Identity-based encryption

DEPLOYMENT

Choose from three modes of deployment — Transparent, Gateway, or Server mode — to meet your specific email security requirements, while minimizing infrastructure changes and service disruptions:

Gateway Mode: Provides inbound and outbound proxy mail transfer agent (MTA) services for existing email gateways. A simple DNS MX record change redirects email to FortiMail for antispam and antivirus scanning. The FortiMail device receives messages, scans for viruses and spam, then relays email to its destination email server for delivery.

Transparent Mode: Each network interface includes a proxy that receives and relays email. Each proxy can intercept SMTP sessions even though the destination IP address is not the FortiMail appliance. FortiMail scans for viruses and spam, then transmits email to the destination email server for delivery. This eliminates the need to change the DNS MX record, or to change the existing email server network configuration.

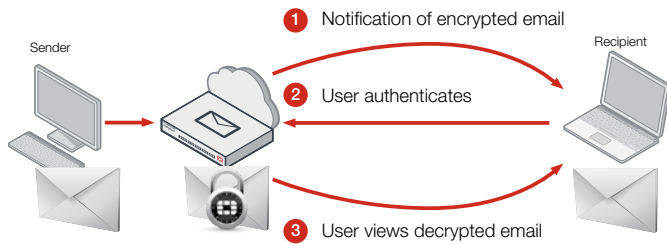

Server Mode: The FortiMail device acts as a stand-alone messaging server with full SMTP email server functionality, including flexible support for secure POP3, IMAP and WebMail access. FortiMail scans email for viruses and spam before delivery. As in Server mode, external MTAs connect to FortiMail, allowing it to function as a protected server.

DEPLOYMENT

Identity-Based Encryption (IBE)

IBE allows FortiMail to deliver confidential and regulated email securely — without requiring additional hardware, software user provisioning, or extra license fees. Use IBE to eliminate paper-based communications and reduce costs.

Policy-Based Encryption: Automatically encrypt messages for compliance, based on content or recipient.

Push or Pull Mode: Use Push, Pull, or a combination of modes to meet your requirements.

Easy to Deploy, Use, and Manage: Deploy IBE in any mode, including Transparent mode, without user provisioning or additional hardware or software.

SPECIFICATIONS

	FORTIMAIL 60D	FORTIMAIL 200E	FORTIMAIL 400E
Recommended Deployment Scenarios			
	Demo, testing, training and small enterprise use with fewer than 100 users*	Small businesses, branch offices, and organizations with fewer than 400 users*	Small-to-mid-sized organizations with up to 1000 users*
Hardware Specifications
